Who is ASTM International?

ASTM International is an international standards organization that develops and publishes voluntary consensus technical standards for a wide range of materials, products, systems and services.

ASTM INTERNATIONAL

Bagcraft ASTM Standards

D6868 COMPLIANT

ASTM D6868 is a standard method that incorporates plastics and polymers as coatings or additives with paper and other substrates designed to be aerobically composted in municipal or industrial facilities.

D6868 HAS THE FOLLOWING REQUIREMENTS:

- Disintegration during composting
- Method specified biodegradation within 180 days
- No adverse impacts on ability of compost to support plant growth
- Compost quality

D6400 COMPLIANT

ASTM D6400 is the standard specification for solid material biodegradation (by composting) required for the labeling of plastics designed to be aerobically composted in municipal or industrial facilities.

D6400 HAS THE FOLLOWING REQUIREMENTS:

- Product must entirely physically disintegrate into the soil. With no distinguishable traces left. Finished compost containing a compostable plastic must pass through a 2 mm screen to be considered acceptable.
- Composted bioplastics cannot contain any heavy metals and finished compost must support plant life
- The product must be bio-assimilated by microorganisms (biodegradation) found in water, soil, etc. at the same rate that leaves, paper and other organic materials biodegrade in their natural environment. 180 days or less. Within a six month timeframe.
