- 33 Trunk Liners

Bag Solutions for Business

Hilex is the nation's premier manufacturer of poly packaging solutions including retail, produce, delivery, takeout bags and other customer focused systems. With industry-leading production capabilities and expertise, we support our customers every step of the way—from packaging development to production and consumer use. We offer solutions for businesses large and small that are convenient, cost effective and practical.

We make our bags from prime-grade materials, with options of virgin or recycled resin, optimized for strength, aesthetics and performance. As an innovator, we lead the industry in providing an extensive range of choices tailored to meet each of our customers' needs.

Our facility processes plastic bags collected at designated store drop-off locations and turns them into new retail bags using the recycled content. It's all part of the Novolex commitment to sustainability.

Sustainability Vision

To create a more sustainable future through innovative packaging solutions that help our customers succeed, operate responsibly across our value chain, and invest in our people and communities. Material conscious by design, we advance solutions that support a circular economy and reduce environmental impact—recognizing that sustainability must work in the real world, across applications, regulations, use, and end-of-life. As our customers' needs evolve, we deliver solutions that scale, adapt, and perform. It's not just packaging. It's real choice for the real world.

Sustainability Partnerships & Certifications

The mark of
responsible forestry

Forest Stewardship Council®

The Forest Stewardship Council (FSC®) promotes responsible forest management through forest management and chain of custody certification. Eligible products manufactured at Duro facilities are FSC chain of custody certified. Novolex uses FSC Trademark license code FSC(R) -C010800.

Sustainable Forestry Initiative®

Sustainable Forestry Initiative (SFI®) is a forest certification organization with forest management, fiber sourcing, chain of custody and certified sourcing standards. Eligible Novolex products manufactured at Bagcraft, Duro, Burrows Packaging, and DeLuxe are available with SFI Certified Sourcing or SFI Chain of Custody claims. Novolex uses SFI Trademark license code 01567.

Biodegradable Products Institute®

Biodegradable Products Institute (BPI®) is a science-driven organization that supports a shift to the circular economy by promoting the production, use, and appropriate end-of-life management of materials and products designed to fully biodegrade in specific biologically active environments. BPI's certification program provides third-party verification that products and packaging displaying the BPI Certification Mark meet applicable scientifically based compostability standards.

Compost Manufacturing Alliance™

Compost Manufacturing Alliance (CMA) certifies eligible compostable products using applicable laboratory testing and field testing. CMA field testing evaluates how products disintegrate under real-world operating conditions at participating commercial composting facilities, complementing laboratory testing conducted under standardized conditions.

ASTM International

ASTM International develops voluntary consensus standards used across industries. ASTM D6400 and ASTM D6868 establish requirements for materials and products designed for aerobic composting in commercial or municipal composting facilities, including criteria related to disintegration, biodegradation, and effects on compost quality.

Film Materials

Plastic

Key Characteristics

High-Density (HDPE)

- Makes "crinkly" sound when you move it—think of grocery T-Shirt bags
- Harder to start or puncture a hole in than Low Density (LLD)
- Once a hole is started, it may "zipper"
- Thinner than LLD, but can hold same or greater weight as LLD
- Gauge (thickness) measured in microns (mic)
- Typical applications: T-Shirt bags and can liners
- Substantial cost savings on a per bag basis
- Recommended for paper, food, leaves and smooth heavy objects

Linear Low-Density (LLDPE)

- Also referred to as "soft" film—quiet when moved, no "crinkly" sound
- A hole in this material will spread less quickly than it would in HDPE
- Gauge (thickness) measured in mil
- Recommended for high-gloss, sharp objects and tough transport conditions

HDPE/LDPE Co-Extruded

- Also referred to as "COEX" film—softer than HDPE, but still some "crinkly" sound
- Glossy outer (LDPE) surface + strong and tough (HDPE) inner layers
- Harder to start or puncture a hole than with straight Low Density (LLD)
- A hole in this material will spread less quickly than it would in straight HDPE
- Gauge (thickness) measured in microns (mic)
- Recommended for retailers who want an upscale-looking T-Shirt bag

Mil & Micron: 1 mil = 25.4 microns

Gauge

Definition

Mil	A measurement equal to 1/1000 of an inch
Micron (μ)	A metric unit of length equal to one millionth of a meter (micrometer)

Convert mic to mil equivalents

mic	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	21	22	23	24	25.40	30.50	38.10	43.20	50.8	57.2	76.2	101.6
mil	0.24	0.28	0.31	0.35	0.39	0.43	0.47	0.51	0.55	0.59	0.63	0.67	0.71	0.75	0.79	0.83	0.87	0.91	0.94	1.00	1.20	1.50	1.70	2.00	2.25	3.00	4.00

Seal Configuration

Seal

Key Characteristics

**Bottom
Star Seal**

- Most common seal in the HDPE produce roll bag markets
- Bottom of the bag looks like a star or appears "bunched up"
- Minimum leak potential
- Star seals are designated by two dimensions: width x length (e.g. 15.00 x 20.00)

**Side Gusset
Seal**

- Forms a flat rectangular-shaped bottom
- Both sides are tucked in to form a pleat or gusset
- Conforms well to the shape of grocery and retail items
- Gusseted bags are designated by three dimensions: width x gusset x height (e.g. 12.00 x 7.00 x 22.00)

**Bottom
Flat Seal**

- No gusset—has a flat seal along the bottom (resembles a pillow case)
- Does not conform well to boxes or round items
- Holds 15-20% more than a star seal bag of the same dimension
- Medium leak potential
- Used for bulk items (seed, candy, confections)
- Flat seal bags are designated by two dimensions: width x length (e.g. 15.00 x 20.00)

Side Seal

- Bag with seals along each side of the bag
- The bottom may be formed with or without a bottom gusset
- Bags with a bottom gusset bags open to form a flat bottom
- Minimal leak potential
- Used for wicket bags, sine wave bags and soft-loop handle bags
- Side seal bags are designated by three dimensions: width x gusset x height (e.g. 21.00 x 8.00 x 20.00)

How to Measure a Bag

T-Shirt Bag

(Width x Gusset x Height)

Soft Loop Handle Bag

(Width x Gusset x Height + Hem)

Sine Wave Bag

(Width x Height + Bottom Gusset + Wave Depth)

Die-Cut Handle Bag

(Width x Height or Width x Gusset x Height)

Bagging Techniques

What you put in your bag matters

Build sides with any item except for crushable items.

Fill the bottom of the bag by utilizing any available space.

Place lighter items on top of the bottom layer.

Plan The Order

- A good bagger looks over the size of the order and plans the load.

Build Up The Walls

- Make a trim square bag, placing flat packages on the side of the sack, which builds up the walls, and gives the bag stability.
- Building up the walls also makes the bag easier to carry and forms a protective center (funnel) for breakable goods.

Place Small, Breakable Items In The Center

- Keep glass bottles and jars off the top of the bag.
- Put glass bottles and jars in the center (funnel) to ensure their protection.
- Always tighten caps on bottles before they are placed in the bag.

Pack It Solid

- Fill in gaps with small merchandise.
- A solid pack prevents shifting and cuts down on breakage.

Open The Bag Quickly

- Open the bag by putting both hands down through the center and squaring the bottom.

Split The Order For Equal Weight

- Don't overload the bag by putting the bulk of heavy merchandise in one bag.
- Balance the load by placing heavy items in two or three bags, the customer will appreciate this gesture, especially if the merchandise has to be carried up a flight of stairs.
- Heavy items should always be double bagged. Avoid bagging where appropriate – see special handling section.

Crushables

- Place crushables in a separate bag or on top of more solid, non-breakable items.
- Eggs, potato chips, soft fruits and vegetables, light bulbs, and bakery goods should be placed on top where they are free from pressure.
- Or place the crushables together in a separate plastic bag.

Build A Solid Foundation

- Build a square foundation and distribute the weight in the center of the bag by placing small cans, glass jars and other items in it.
- This strong base helps the bag to stand upright and makes it easier to carry. From this point, continue to build your load from heavy to light.
- Notice the word "place." Never throw items into the bag.
- Place the items with grace and speed, but never throw them.

Special Handling!

- Ammonia, bleach and other chemicals should not be placed with food items.
- The residue on these items will contaminate the food. Avoid danger by double bagging these items separately.
- Don't bag large heavy items such as gallons of milk, gallons of bleach, gallons of water, sacks of vegetables, frozen turkeys, pet foods, laundry detergents, cases of soda and items with built in handles or carry assist capabilities.

Caution

In order to avoid bag failure and potentially serious injury to person or property, at all times and for all interactions with the bags, please follow the below instructions: • Maintain the integrity and structure of the bag, and prevent any scrapes, tears, abrasions, or holes; particularly when using bags along counters, in buggies, and against the consumer's goods. • Never overload the bag with excess weight or with goods that may cause the bag to fail. • Always use reasonable good judgment when packing bags with goods, and double bag the goods for extra protection or where necessary to avoid overload failure or goods that may cause the bag to fail, or as a last resort avoid bagging the goods altogether and place goods directly into the consumer's cart. Sample Goods to Consider for Double Bagging: • Metal Canned Goods • Glass Bottles, Containers, or Jars • Heavyweight Goods with unique or sharp edges or corners • Any Goods with unique or sharp edges or corners. When double bagging is warranted, the bagged merchandise should be picked up using all four bag handles. Sample Goods to Consider to Avoid Bagging and for Placing Directly into Consumer's cart: • Milk • Two Liter Containers • Large Wine Bottles • Large Canned Goods • Laundry Detergent • Frozen Turkeys • Any Goods with Built in Handles or Carry Assist Capabilities. Use extra caution at all times when bagging goods and always use reasonable good judgment to avoid bag failure and potentially serious injury to person or property.

T-Shirt Bags

QuikMate EZ® T-Shirt Bags

Performance Features

- Engineered convenient T-Shirt bag style with integrated tabs
- Bag sizes to fit any purchase requirements
- Patented easy-open design
- Dispensing systems including racks, trays and compact dispensers for maximizing productivity
- Hardware to fit almost any check stand configuration
- Custom printing provides branding opportunity
- Jumbo T-Shirt bags are also available
- Compostable options available

Diecut Merchandise Bags

Performance Features

- Wide opening for easy loading
- Diecut handle for ease in carrying
- High density and low density film available in multiple colors
- Available in both side or bottom gussets
- Available in multiple sizes with expandable gussets for larger items
- Custom printing available

Available Tab Styles

Loose pack

Blocked header

Integral header

Available Handle Styles

Kidney handle

1.00" x 3.00" racetrack handles

2.00" round hole handle

Available Seal Styles

Bottom Seal Features

Available in HDPE or COEX Film

Side Seal Features

- Manufactured with a variety of options – with/without: gusset, hemmed top, handle
- Available in LDPE, HDPE or COEX Film

E-commerce Bag

ProWave™ Tote

Performance Features

- Made from minimum 20% recycled content, or from at least 40% Post-Consumer Material
- Low profile design and flat bottom for easy loading
- Large, comfortable handles for carrying
- Fully customizable options for increased brand awareness and marketing
- Made from heavy gauge polyethylene that stands up for loading
- Unique handle and upper flaps provide extra security to keep contents in the bag

Open the Bag

Snap the bag open to square up the flat bottom

1. Build Side Walls

- Cereal boxes*
- Pancakes mix*
- Toilet paper
- Frozen dinners
- Paper plates
- Frozen waffles

2. Fill the Base

- Canned vegetables
- Condiments
- Canned fruit
- Butter
- Peanut butter
- Block cheeses
- Soup

3. Fill it Up

- Lighter items
- Spices
- Noodles

QuikStar® Self-Opening, Star Seal Header Bag (Produce Bags)

Performance Features

- Variety of dispensing options: on partitions, wet case walls or floor stands
- Patented EZ self-opening bags provide one-at-a-time pinch and pull dispensing to eliminate bag waste and shopper frustration
- Multiple bag sizes and films match the bag to the produce (standard, organic, greens, corn/yams)
- Anytime restocking so dispensers never run out, shoppers are never empty handed
- Integral tab, headerless design leaves nothing behind on the rack or in your department
- Star seal bottom—the strongest seal option
- Stock or custom prints to promote your brand
- Compostable option available
